

Project Design Phase-I
Solution Architecture
Team 10.2

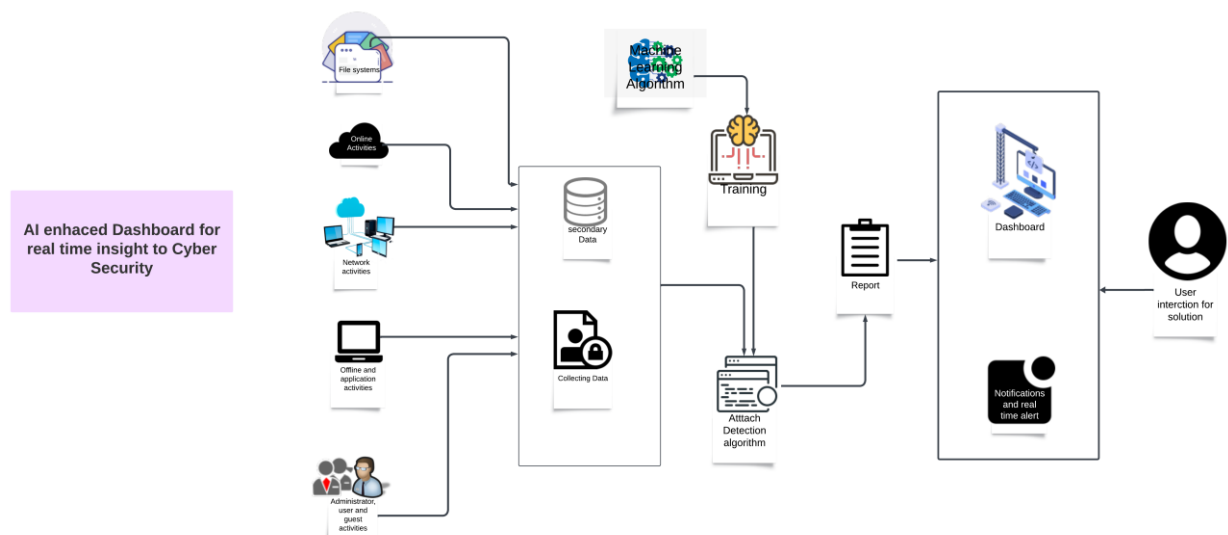

Date	19 September 2022
Team ID	PNT2022TMID593452
Project Name	Project - 10 AI-enhanced security analytics dashboard that provides real-time insights into security events, trends, and risks
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

AI-enhanced security analytics dashboard that provides real-time insights into security events, trends, and risks:
